Try to spare the boys and horse som and give the corn another turn with tor. Don't try to run it deep Wheat harvest has already begun in the outhern and central sections of Indiana,

lilinois and Ohio, and the quality of the grain is reported very fine thus far. Our first planting of cucumbers, the careful protection none could have been exved. Later plantings, June 20, came up the value of late cut hay. Ther strong and thrifty, and not a pest has infested them. They are to-day giving fine own "striped bugs." Without the most to discuss the merits or demerits ted them. They are to-day giving fine hay crop was all harvested by t

The hay crop of Massachusetts and Concecticut is reported to be very light.

Maine Farmer.

wall set. Baldwins did not make so full a blossom as most other varieties, and in many places are showing but few apples. Orchards of this variety, however, that are kept rich and well cultivated, will give a good crop.

Hot weather has been prevailing throughpure. The property of the agricult pures, and speakers from the agricult pures.

ont the Northern Scaces, and under its "atump," began to vie with each effect, crops have been pushing along rapidly. The hay crop, however, throughout this State has not been filling the promise indicated by our correspondents, the first of June. The growth has been weak and alow. The crop certainly must be a light cut and dried before it had attained alow. The crop certainly must be a light of the property of the course, a farmer we have the course of the course, a farmer we have the course of the c

The problem of practical education for the farmer boy is being worked out at the Storrs' Farm School at Mansfield, Connecticut. At the recent graduating exercises the Governor of the State was present and gave an address. The graduating these were all on topics relating to the farm and its surroundings. The exercises took place in a grove with a thousand people, farmers, present.

gun to "Walk and Talk on the Farm" in that valuable monthly. A further refined experience from his farm practice will enable him after his years of silence to talk milk, yet that milk is thin and

our Maine farmers get tired over one. The amount of the crop of strawberries mature grasses of June. In those next year will depend much on the treat-

ment of the bed this year. A strong growth late in summer and during the first half of the autumn will give a good crop next year. Scatter manure between the rows or about the stools, and work it into the surface soil with a steel rake, or hoe. If in the garden, or with horse culture in the first culture in the first culture in the first culture in the surface soil with a steel rake, or hoe.

if in the garden, or with horse culture in the field. Keep the runners out and a fine growth will be the result.

That haymaker who goes right along with his work of haying as he does with his other farm work, withous dodging on account of the prospective fickleness of the weather, or without withdrawing from the field, because the early morning is not clear, will as a rule get his hay in as good condition, and certainly will get it faster and do it cheaper than one who is timid about it and dares not "pitch in" for fear of getting his hay hurt. Up and after it, is the word, neither working too hard, nor making long days, but putting the work in systematically and regular.

That the Short-horns have lost none of allowed to stand eleven days longe pounds and eleven days longe pounds again of 778 pounds to the acre; and fro allowed to stand eleven days longe pounds—again of 778 pounds to the acre; and fro allowed to stand eleven days longer pounds and the cutting, there was a difference of the following to the acre; and fro allowed to stand eleven days longer than the cutting, there was a difference of the acre; and fro allowed to stand eleven days longer than the acre; and fro allowed to stand eleven days longer than the acre; and fro allowed to stand eleven days longer than the acre; and fro allowed to stand eleven days longer than the acre; and fro allowed to stand eleven days longer than the acre; and fro allowed to stand eleven days longer than the acre; and fro allowed to stand eleven days longer than the acre; and fro allowed to stand eleven days longer than the acre; and fro allowed to stand eleven days longer than the acre; and fro allowed to stand eleven days longer than the acre; and fro allowed to stand eleven days longer than the acre; and fro allowed to stand eleven days longer than the acre; and fro allowed to stand eleven days longer than the acre; and fro allowed to stand eleven days longer than the acre; and fro allowed to stand eleven days longer than the acre; and from the acre allowed to stand eleven days longer than the acre allowed to stand eleven days longer than the acre allowed to stand eleven days longer than the acre allowed to stand eleven days longer than the acre allowed to stand eleven days longer than the acre allowed to stand eleven days longer than the acre allowed to stand eleven days longer than the acre allowed to stand eleven days longer than the acre allowed to stand eleven days longer than the acre allowed to stand eleven days longer than the acre allowed to stand eleven days longer than the acre allowed to stand eleven days longer than the acre allowed the acre allowed the acre allowed to stand eleven days longer than the acre allowed to sta ton, Kentucky, where the following prices were made: Duchesses, 4 averaged \$4,-962,50; highest price, \$7,000.00; lowest, at our own college farm under Prices \$3,550.00. Kirkilvingstons, 2 averaged \$3,-100.00; Wild Eyes, 5 averaged \$8,51.00; Mild Eyes, 5 averaged \$1,050.00. Other families sold for prices averaging above a thousand dollars. In all there were 100 animals sold at an average of \$902.88. At the Kellogg Combination sale of Jerseys held at New York, June 17, 18, the first day 68 head brought an average of \$252; the second day 66 head averaged \$150.00; Mild Eyes, 500.00; M

The great hay harvest is upon us. This is the principal crop on every farm in the State, and is of more money value than all the cher crops put together. Yet it must be there crops put together. Yet it must be there exist in about twenty working days!

No wonder the energy of every available man is taxed to the utmost, and that the labor of every team, and the aid of every possible labor saving implement, is called into requisition. We like to put the mover the early cut hay has given the best resul labor of every team, and the aid of every possible labor saving implement, is called into requisition. We like to put the mover the early cut hay has given the fact of the property team. at work in the afternoon when the grass cut will have all the next forenoon to dry in. The rake can then be put into it early in the afternoon, and the hay be put up while it is yet warm and dry. It will then dry off rapidly during the night, and next day be ready to go into the barn without further labor upon it. "Let the hay dry itself" is a pretty good motto to work from, and with as little work as possible from you in stirring and turning, when labor is high and money not plenty. There is a deal of high priced labor wasted in unnecessarily handling hay in drying. We long ago adopted the rule not to employ labor in opening hay, after it has been put up, and the rule is seldom violated unless the hay is wet down with a rain.

Permits will be issued to quarantine at such ports as the importer may elect, so far as facilities exist at such port, but in no case will permits for importation at any port be granted in excess of the accommodations of the Government quarantine station at such port. Every importer shall, on the day of shipment from a foreign port, telegraph to the Secretary of the Treasury the number of cattle shipped, the vassel upon which they are shipped and the port at which they are to be landed. The ports now provided with quarantine stations under the control of the Treasury Department, are Portland, Boston, New York and Baltimore.

BADGER & MANLEY, F

Vol. LII.

Late Out Hay. It may be too late at this writ

The prospect for a crop of apples is good at this time. Greenings, Belliflowers, and miscellaneous sorts generally, are well set. Baldwins did not make so full a blossom as most other varieties, and in pluments were introduced, rend

The many readers of the American Ag-réculturist will be pleased that Joseph Harris has again in the July number be-in make growth but actually shrink able him after his years of silence to talk over with the Drawer the experiences of those years with that freshnoss and variety which the farm is ever furnishing.

Peter Henderson says that he has sold six hundred dollars' worth of early cabbages from a single crop on one acre of land; that he followed it with a crop of lettuce which brought one hundred and forty dollars; and the lettuce with celery, which sold for six hundred dollars. What a weary man he must be, raising three crops a year on the same land. Some of our Maine farmers get tired over one. when eating a ration of hay with

2,760 pounds to the acre; and fro

at work in the afternoon when the grass 3. When fed for butter contents

up, and the rule is seldom violated unless the hay is wet down with a rain.

The additional regulations regarding the importation of neat entite made by the authorities at Washington, and taking force Aug. I. 1884, are to the effect that those from any part of the world, except North and South America, can be landed only at ports where quarantine stations exist under the control of treasury officers. A permit from the Treasury Department must be obtained, stating the number and kind of animals to be imported, the port at which they are to be landed, and the approximate date of their arrival. This permit shall secure the reception of the number and kind of animals specified therein at the port and quarantine station named at the dates prescribed for their arrival, or at any time during three weeks immediately following, after which the permit shall in no case be available at any port other than the one mentioned therein. Permits will be issued to quarantine at each ports as the importer may elect, so far as facilities exist at such port, but in
